Javeed Ishaq

Product Engineer | I Ship Mobile + Web Products With Practical AI
Sahiwal District, Punjab, Pakistan

Summary

I build complete mobile and web products with practical AI where it actually improves the product. My strongest production background is in Flutter, but I work across the full delivery stack:- Mobile: Flutter- Web and admin: Next.js / React- Backend: Node.js, TypeScript, NestJS, PostgreSQL, Supabase- AI features: search, summaries, recommendations, retrieval, structured workflows, and operational AI support. I have shipped production systems across mobility, healthcare-adjacent, and operational product environments. My focus is simple: become increasingly valuable as a product engineer who can own delivery across app, backend, admin, and AI-assisted workflows. What I actually do:- ship backend-connected mobile and web products- design APIs, auth flows, data models, and operational workflows- cut scope to get useful products shipped faster- add practical AI features instead of generic chatbot hype- turn messy requirements into working software. I am strongest where a startup or SMB needs one engineer who can move from product problem to shipped system. Open to:- remote Product Engineer roles- Full-Stack Product Engineer roles- selective contract work aligned with mobile, web, backend, and practical AI delivery

Experience

Crunch Africa

Full Stack Product Engineer | AI Architect
December 2024 - Present (1 year 7 months)
Johannesburg, South Africa

- Built and shipped distributed backend services using NestJS and Python FastAPI — handling 2x the request volume across mobile and web clients.
- Integrated LLM-powered search and response using LangGraph + pgvector, improving response accuracy by an estimated 40% over baseline keyword search.

- Delivered full-stack API services consumed by Flutter mobile (iOS/Android) and Next.js web dashboards — reducing time-to-feature by 30% through reusable backend modules.
- Owned end-to-end delivery from database schema to deployed API: NestJS backends, AI pipelines, and front-end integration.

Hyperhire

Full Stack Engineer

October 2023 - November 2024 (1 year 2 months)

South Korea

- Built and shipped Flutter mobile apps backed by Supabase (PostgreSQL) with a NestJS API layer and a Next.js web admin panel — handling real-time sync, auth, and offline-first data across mobile and web surfaces.
- Reduced screen load times by ~35% through state management optimization (BLoC/Riverpod) and lazy-loading patterns.
- Delivered performance improvements that cut rendering latency — Supabase real-time subscriptions and NestJS WebSockets kept data in sync across 1,000+ concurrent devices.
- Led end-to-end feature delivery from mobile UI → NestJS API (TypeScript) → database schema design in both Supabase (PostgreSQL) and MySQL, reducing feature cycle time by ~25%.

Crunch Africa

Senior Apps Developer

March 2020 - September 2023 (3 years 7 months)

Johannesburg, South Africa

- Built and maintained backend microservices in Node.js/NestJS with PostgreSQL, serving 100K+ mobile users across consumer-facing Flutter and Next.js platforms.
- Designed and shipped RESTful APIs that cut average mobile app response times by 40% — through query optimization, caching strategies, and efficient NestJS service architecture.

- Delivered full-stack mobile and web systems end-to-end: Flutter frontend → NestJS API → PostgreSQL, reducing release cycles from monthly to bi-weekly through modular backend design and CI/CD automation.

GTek Solutions

Full Stack Engineer

November 2018 - February 2020 (1 year 4 months)

Lahore District

- Built API backends and mobile features for cross-platform applications.
- Shipped user auth, push notifications, and operational workflows across mobile and backend systems.
- Improved product stability and delivery quality through refactoring and better system structure.

EEIZO IT Solutions

Full Stack Engineer

September 2017 - October 2018 (1 year 2 months)

Sahiwal

- Developed and maintained cross-platform mobile applications, focusing on robust API consumption and data state management.
- Guided technical teams through complex deployment pipelines and architectural migrations.
- Executed comprehensive automated testing and quality assurance protocols to stabilize legacy systems.
